

The Access to Justice Research Network (AJRN) aims to connect a wide range of justice stakeholders who are passionate about access to justice in Canada. Coordinated by the Canadian Forum on Civil Justice the AJRN allows its members to share research, resources and other material related to access to justice.

Le but du Réseau de recherche sur l'accès à la justice (RRAJ) est de relier un vaste éventail d'intervenants en matière de justice. Le RRAJ est entretenu par le Forum canadien sur la justice civile (FCJC) et il permet aux membres du réseau de partager facilement des ressources d'accès à la justice.

## Cyberjustice Laboratory launches major “Autonomy through Cyberjustice Technologies” Research Project

JUNE 19, 2018 / AJRN1

The **Cyberjustice Laboratory** (Laboratoire de Cyberjustice) in Montreal has launched a 6-year research initiative to examine artificial intelligence in the justice sector. This **Social Sciences and Humanities Research Council of Canada** (SSHRC) funded project includes 16 sub-projects, and a multi-disciplinary and international team of 45 researchers and 42 partners.

The Autonomy through Cyberjustice Technologies (ACT) research project by the Cyberjustice Laboratory will provide greater understanding of the socio-legal and ethical underpinnings of applying and integrating artificial intelligence tools within the justice system. More information about this important research initiative, being led Professor Karim Benyekhlef, Director of the Cyberjustice Laboratory, is available in the press release, available in English here:
